

PROCESSING

Generated on 22-05-2012

Eurotech Aluminium Castings has an extensive machine park. CNC milling and CNC turning are the principal parts of the processing. There are also possibilities for welding and construction work. Through perfect cooperation with the sister company Pezag in the Czech Republic, a competitive cost price is achieved both in the prototype pre-series and the series phase. Eurotech Aluminium Castings ensures that the product is created in the correct location. As well as its own production companies, Eurotech Aluminium Castings has an extensive network of suppliers with which it cooperates closely. The machining and measuring machines in the Czech Republic are as similar as possible to those in the Netherlands. This will ensure a smooth transfer of the production to Pezag. Programmes and tools will be transferred directly.

Production planning for the machining works closely with the production planning of the foundry department and for complex projects, a project structure is set up including project management.
